- EXPLANATION**
-  **Anticline**- arrows perpendicular to axis show symmetry, i.e., short arrow indicates flank with steeper dip. Axis is dashed where covered or approximately located. Arrow on axis indicates direction of plunge.
 -  **Normal Faults**- ball on downthrown block (dashed where covered or approximately located). Queried where existence is questionable.
 -  **Thrust/Reverse Faults**- teeth on upthrown block (dashed where covered or approximately located). Queried where existence is questionable.
 -  **Detachment Faults**- open squares on detachment block (dashed where covered or approximately located). Queried where existence is questionable.
 -  **Shear Zones**
 -  **Possible Active Fault**- as identified by Case (1986).

THIS MAP WAS COMPILED FROM THE MOST RECENT AVAILABLE INFORMATION AND IS ONLY AS RELIABLE AND COMPLETE AS THE SOURCES CONSULTED. SOME SMALLER FEATURES WERE OMITTED SINCE THEY COULD NOT BE PLOTTED AT THIS SCALE. SOURCES CONSULTED ARE LISTED IN ACCOMPANYING REFERENCE LIST.
