

GEOLOGICAL SURVEY OF WYOMING

MR 43-11

M. S. (Bud) Mead, Jr. -- Manganese, Beaver Creek.

Assays run from 23 to 73%. Claims are staked out for about 2 miles. These are about 15 miles from a hard-surfaced highway.

Deposit is on Beaver Creek about 50 miles from Buffalo. Over the 14 claims there are 4 types of Mn. - 200,000 of sandstone in sight that runs around 70%. A hard, glassy lead that runs 45-65%. And the salmon color (rhodochrorite ?) fingers in leads.

Have done nothing but prospecting.

(All the above data from a letter to H. D. Thomas April 20, 1943).

Representative of R.F.C. says the deposit is "no good."

GEOLOGICAL SURVEY OF WYOMING

M.S. (Bud) Mead, Jr. -- Manganese, Beaver Creek

Area runs from 23 to 73%. Claims are staked out for about 2 miles. These are about 15 miles from a hard-surfaced highway.

Deposit is on Beaver Creek about 50 miles from Buffalo. Over the 14 claims there are 4 types of Mn. - 200,000 of sandstone in sight that runs 38-40%. A mugged fm. that runs around 70%. A hard glassy lead that runs 45-65%. And the salmon color (rhodochrosite?) fungus in leads.

Have done nothing but prospecting
